

Food Analytical Laboratories
Safe Food - Fast

Our goal is to provide the industry with the most cost-effective high speed food testing in our brand new 20,000 sq ft facility in the UK.

To do this we have brought together the most experienced team of Food Microbiologists and Chemists as well as what we believe to be the best laboratory based IT team in the UK.

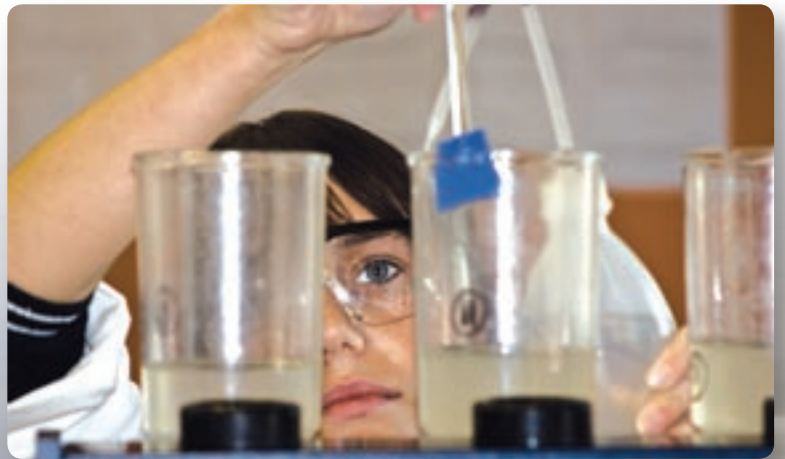

With no venture capitalist or third party investors this allows the management team to re-invest all our profit back into the business. It is this philosophy which has allowed FAL to invest in the latest state of the art equipment such as Nuclear Magnetic Resonance (NMR) and rapid automated fat and protein analysis.

In Microbiology ELISA allows for the rapid detection of Salmonella and Listeria within 48hrs along with UKAS accredited Marks and Spencer methods for those clients that require them.

Clients can choose how they want to receive data and our experience IT Team will install and configure our Netlab™ software to your personal requirements to provide automated registration and delivery of results, and to allow for custom data searches, trending and reporting that turn the results we provide into the specific information you need to run your company.

With 15 refrigerated vehicles covering the UK we will collect any time anywhere to ensure the service you require when you want it.

Welcome to the UK's **Newest** and **Biggest** Privately Owned **Food Testing Facility**

...investing in testing...

www.FALabs.com
